

DimensionU Implementation Strategies

1 Classroom Instructional Practice & Reinforcement:

DimensionU offers an engaging way to reinforce/practice State Standards in math and/or literacy that connect to classroom lessons and instruction. Utilize DimensionU in-class, 20-30 minutes each week, focused on current or past instruction. This will help keep your students engaged while creating a collaborative, team-building approach to reinforce the curriculum.

For classes with students at varying levels, DimensionU enables teachers to let students focus on individualized skills, while also working in a collaborative, group-based setting. Students can participate as a team with other students who all may be working on entirely different levels of skills/curriculum.

Teachers and administrators can track student performance in the DimensionU Educator Portal. The more time students spend on DimensionU, the more it will help develop their mental capacity and fluency

2 Beyond the School Day:

Not only can you share log-in information with parents & students as an at-home activity, DimensionU can be used as part of your school's regular before- and after-school programs such as a Math Gaming Club, Saturday Test-prep, or Summer Session. Applying DimensionU is exciting for students and allows them to spend more time focused on:

- 1) reinforcing classroom instruction
- 2) practicing lower level skills that are deficient or
- 3) advancing beyond to higher level skills.

Since students enjoy playing DimensionU, creating more opportunities for them to use it will correlate to improved academic performance in class and on state tests.
